

Share your experience in deciding about a clinical trial for your child's cancer care

Your story matters. We want to hear about it.

What this is about

We want to learn from parents about **what it's like to decide about clinical trials** for their child's cancer care.

Who we're looking for

- **Parents of a child with cancer** who was offered or enrolled in an early-phase or precision-medicine trial.
- Whether you said **yes or no** to a clinical trial, and whether your child is **in treatment, survivorship, or deceased**, we want to hear from you.

Why we're doing this

Your perspective can help doctors and researchers **better support families** offered clinical trials in the future. What we learn will help improve how care teams talk about options with parents facing these decisions.

What we're asking you to do

- **Online survey** (about 45-60 minutes) about your experiences, feelings, support, and how you made decisions about trial participation.
- **Optional conversation** (about 30-60 minutes) with a research psychologist (in person or over video) to talk more about your experience.

Scan the code to get started.

Scan the **QR code** with your phone or **visit**:
